

Project Design Phase

Solution Architecture

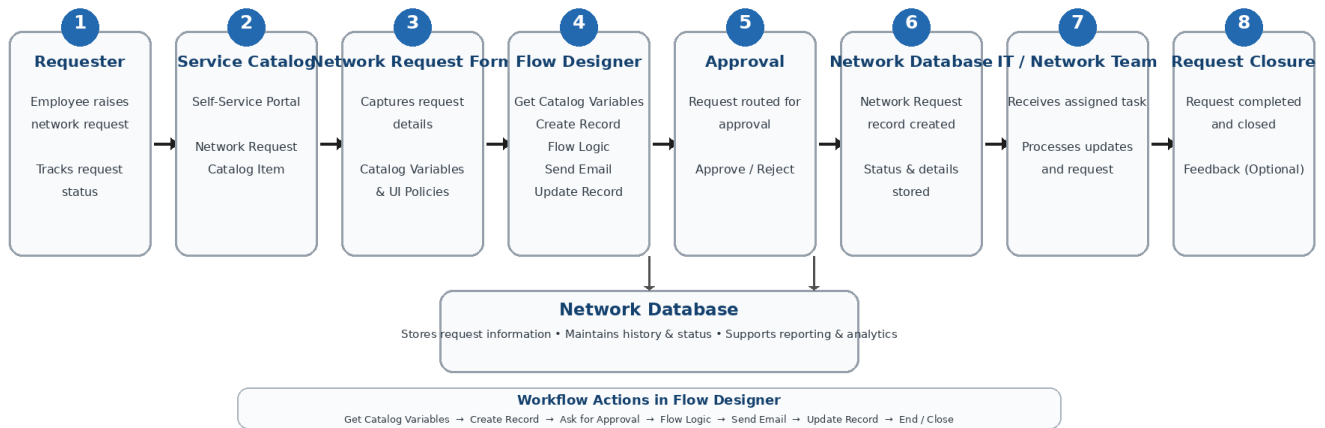

Date	19 September 2026
Project Name	Automated-Network-Request Management
Maximum Marks	4 Marks

The project uses Flow Designer actions including **Get Catalog Variables, Create Record, Ask for Approval, Flow Logic, Send Email, and Update Record** to automate the network request lifecycle.

Layer	Component	Function
User Layer	Requester / IT Team / Approver	Submit, review, approve, and process network requests
Application Layer	ServiceNow Service Catalog	Provides the Network Request catalog item
Form Layer	Catalog Variables & UI Policies	Captures request details and displays fields dynamically
Workflow Layer	Flow Designer	Automates request processing and approval
Approval Layer	Ask for Approval	Handles approval or rejection of requests
Data Layer	Network Database Table	Stores network request information
Notification Layer	Email Notification	Sends request status and approval updates
Fulfillment Layer	Network / IT Team	Processes approved requests
Reporting Layer	Reports & Analytics	Monitors request volume, resolution time, and SLA performance

Solution Architecture – Automated Network Request Management

Architecture Flow

Architecture Flow: The requester submits a network request through the ServiceNow Service Catalog. The request form captures the required details, Flow Designer automates record creation and approval, the network database maintains request status and history, and the IT/Network Team fulfills approved requests before closure.
