SmartInternz

Project Title

Automated Network Request

Management in ServiceNow

Name: Nalam Siva Samanth Kishor Gupta

College: Chalapathi Institute of Engineering and Technology

Email: y23csm039@chalapathiengg.ac.in

Project overview

The **Automated Network Request Management** project in ServiceNow is designed to make network service requests faster and easier to manage. Users can submit network-related requests through the **Service Catalog** using a self-service portal.

The system automatically **routes requests, manages approvals, assigns tasks, and tracks their progress**. By reducing manual work and automating repetitive processes, the solution helps IT teams complete requests quickly and efficiently.

This improves **turnaround time, SLA compliance, request visibility, and overall user experience**.

7. Conclusion

1. Introduction

Organizations depend on network services for their daily operations. Employees may need different network services such as new connections, device connectivity, relocation, or other network-related support.

Handling these requests manually can take more time and may lead to errors or delays. It can also be difficult for users and IT teams to track the current status of a request.

The **Automated Network Request Management in ServiceNow** project provides a simple solution to manage these requests in an organized and automated way.

Users can submit their network requests through the **Service Catalog**. Based on the submitted request, ServiceNow can collect the required information, create records, send them for approval, assign the required tasks, and send notifications.

This reduces manual work and helps the IT team process requests faster and more efficiently.

2. Project Objective

The main objective of this project is to **automate the process of handling network service requests in ServiceNow**.

The system allows users to submit requests through a self-service catalog. The required information is collected through a structured form.

After the request is submitted, the system can automatically:

- Capture the request details
- Create a network request record
- Send the request for approval
- Process the approval result
- Send email notifications
- Update the request record
- Track the request status

The main goal is to **reduce manual effort, improve processing speed, and provide better visibility of network requests.**

3. Key Features

The major features of the project are: **3.1**

Service Catalog

A dedicated **Network Request** catalog item is created so users can submit their network requirements.

3.2 Dynamic Form

The form contains different fields to collect the information required to process the request.

3.3 Automated Approvals

Requests can be automatically sent for approval based on the configured process.

3.4 Flow Designer

Flow Designer is used to automate the complete request process.

3.5 Record Creation

When a user submits a request, the required information can be used to create a record in the Network Database table.

3.6 Email Notifications

The system can send email notifications to the required users or teams.

3.7 Request Tracking

The request information and its progress can be tracked through ServiceNow.

These features help reduce repetitive manual activities and make the request process more organized.

4. ServiceNow Developer Setup:

Create a Developer Account

1. Go to ServiceNow Developer Portal(<https://developer.servicenow.com/dev.do>). Sign up for a free developer account and fill out the following details.

The image shows the ServiceNow Developer Portal sign-up page. On the left, there's a dark blue background with the text "Solve problems. Explore resources. Get help." and an illustration of people working on a large green and white puzzle. On the right, there's a white sign-up form titled "Sign up for a ServiceNow ID". The form includes fields for Email, First Name, Last Name, Country (a dropdown menu), State (a dropdown menu), Password, and Confirm Password. There is a checkbox for "I'm not a robot" with a reCAPTCHA logo. At the bottom, there's a checkbox for "I have read and agree to the ServiceNow Website Terms of Use and understand that my personal information is processed in accordance with Privacy Statement." and two buttons: "Sign in to an existing account" and "Sign Up".

2. After signing up, you will get a verification mail to your provided email id. After the verification your ServiceNow Developer Portal Home Page will appear.
3. Now click on start building it will take you to the section where you can **request a Personal Developer Instance (PDI)** or start using **App Engine Studio** and other tools.
4. **Profile Icon (Top Right Corner)** → Manage your account, request instances, and check your developer profile.

5. Project Implementation in ServiceNow:

After the instance building is completed, the page will be directed to your creator studio.

Creator Studio in ServiceNow provides a **guided, no-code environment** to build applications quickly. It is especially useful for creating **request-based applications** by defining forms, setting up tables, and automating workflows.

a. Service Catalog Creation

i. Creation of Service Catalog

1. Navigate to Application navigator
2. Click on All >> search for Service Catalog
3. Under Service Catalog>> Maintain items
4. Click on New
5. Fill the details >> Name– Network Request
6. Select Catalog>> Service Catalog
7. Select Category>> Network
8. Fill the Short Description as Network request Management
9. Click on Save.

< ≡ Catalog Item
 Network Request

Copy Try It Update Edit in Catalog Builder Delete

Catalog items are goods or services available to order from the service catalog. Items can be anything from hardware, like tablets and phones, to software applications, to furniture and office supplies.

- Enter a Name and Short description to display for the item.
- Enter a Price, approvals, variables, and other information as needed.

Name Network Request Application Global ⓘ

Catalogs ⓘ Service Catalog

ii. Variables Configuration

Open the catalog item just created.

Scroll down to the **Variables** related list and click **New** to create form fields.

1. Select Variables type as Single, Multi line text, reference, choices etc as per requirement
2. Catalog item– Network Request
3. Order–100,200,300,,,
4. Question– provide the variable label
5. Name–provide the variables name(used for scripting)
6. Tooltip– this will appear when cursor overed on the field
7. Example text – this will suggest what we need to enter on the field.
8. Mandatory, Read-Only– need to configure on demand.
9. Auto populate– need to select dependent variable, apply dot walking to get selected value.
10. Click on Save or Submit.

Variables (10)	Variable Sets (1)	Catalog UI Policies (1)	Catalog Client Scripts	Available For	Not Available For	Categories (1)	Catalogs (1)	Catalog Data Lookup Definitions	Related Articles	Related Catalog Items

		Single Line Text	If this is a relocation, Please provide ...						320	
		Container Start	Location & Devices Type						400	
		Single Line Text	Please provide address here						410	
		Multiple Choice	Types of Devices						420	
		Single Line Text	Provide device details here						430	
		Container Start	Additional information						500	
		Single Line Text	If anything else, please specify						510	

iii. Variables Types

1. Is this a New connection or Relocation? >> **Choice** >> **New/ Relocation/None**
2. If this is a relocation, Please provide your relocated address here>>**String**
3. Types of devices>> **Choice**>> **Laptop/Mobiles/Others**
4. Please provide address here>>**String**
5. Provide device details here>> **String**
6. If anything else, please specify>> **String**

iv. Variable Set Configuration

To enhance form usability:

- Navigate to the **Variable Sets** (optional).
- Follow the same procedure as we used for Variables Creation, for the variable set as well.
- Apply variable sets to the catalog item.

phonenumber	Single Line Text	Phone Number		

v. Catalog UI Policy Configuration

Scenario: If user selects types of devices is **Others**, then Please specify field should populate.

Procedure:

1. Navigate to catalog items
2. Open Network Request item
3. In related list, we have Catalog UI policy
4. Click on New button to configure New UI policy
5. Select Applies to as Catalog item
6. Select catalog item as Network Request
7. Provide short description, if required
8. Apply condition>> **types of devices is others**

9. Click on save, after saving the form will get UI policy actions in the related list

10. Click on New button to configure new UI Policy action, and Select the variable which we want to display on condition

11. Make Visible True as per our requirement

12. Update the UI Policy and Test the same on Catalog form

b. Creation of Table

i. Creation of Table

1. **Navigate to:** System Definition > **Tables.**

a. Click **New** to create a new table.

b. **Fill in Table Information:**

i. **Name:** Name of the table ----- ii. **Label:** Backend name of the table----- iii.

Auto-generate schema: Leave it checked if you'd like ServiceNow to autogenerate schema fields.

c. Click **Submit** to create the table.

Table Network DataBase Table		Delete	Update	Delete All Records
A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. More Info				
* Label	Network DataBase Table	Application	Global	
* Name	u_network_database_table	Remote Table		

ii. Creation of fields

In ServiceNow, fields are created at the **table** level. To create a field, you first need to identify the table where the field will reside.

1. In the **Application Navigator** (left-side panel), type **Tables** in the search bar.

2. Under **System Definition**, click **Tables**. This will take you to a list of all tables in the

system. a. Select the Table to Add the Field

From the list of tables, search for and select the **table** you want to add a field to. For example, if you want to add a field to the **Network database** table:

1. Type "**Network database**" in the search box or scroll through the list.

2. Click on the **Network database** table name. You'll now see a list of all fields

(columns) associated with the **Network database** table.

b. Open the Table's Columns

After selecting the table, you'll be brought to a view that lists all the columns (fields) that currently exist on that table.

To create a new field (column), go to the **Columns** tab (this is where all fields for the selected table are listed).

c. Create a New Field

1. In the **Columns** tab, click the **New** button located at the top-right corner of the page to create a new field.

2. You'll now be prompted with a form where you need to define the new field. The following fields need to be filled out:

Table Columns for text Search						
Dictionary Entries						
	Column label	Type	Reference	Max length	Default value	Display
×	Work Status	String	(empty)	40		false
×	Device Details	String	(empty)	40		false
×	Requested For	String	(empty)	40		false
×	Date of Enquiry	Date	(empty)	40		false
	Sys ID	Sys ID (GUID)	(empty)	32		false
	Created by	String	(empty)	40		false
	Created	Date/Time	(empty)	40		false
	Updated by	String	(empty)	40		false
	Updates	Integer	(empty)	40		false
	Updated	Date/Time	(empty)	40		false
×	Customer Address	String	(empty)	40		false
×	Request Number	String	(empty)	40		false
×	Assignment Group	Reference	Group	32		false
×	Customer Document	String	(empty)	40		false
×	Assigned to	Reference	User	32		false

c. Request Approvals Creation(Related List)

i. Creation of Related List

1. Navigate to **System Definition > Relationships**.
2. Click **New** to create a new relationship.
3. Fill in the following details:
 - o **Name:** Approval Request
 - o **Applies to Table :** Network Database table.
 - o **Queries from Table :** Sysapprovals table.
 - o **Active:** Make sure it's set to **True**.
4. Save the relationship.

Relationship Approval Request		Update	Delete
Name: Approval Request	Application: Global		
Advanced ☐	Applies to table: Network DataBase Table [u_network_da...		
	Queries from table: Approval [sysapproval_approver]		

ii. Adding Related List to the Table

1. Navigate to **Form Designer** for the table where you want to show related records.
2. Add a **Related List** widget to the form.
3. Select the **Related List** you want to show

Query with  Turn on ECMAScript 2021 (ES12) mode 

```
1 (function refineQuery(current, parent) {
2
3     // Add your code here, such as current.addQuery(field, value);
4     current.addQuery('source_table', parent.getTableName());
5     current.addQuery('document_id', parent.sys_id);
6
7 })(current, parent);
```

d. Creation & Implementation of flows, Actions in Flow Designer

i. Creation of Flow

1. Navigate to Flow designer home page
2. Click on New to create a new flow
3. Provide flow name as **Network Request**
4. Provide description of flow 5. Click on Build flow.

ii. Configuring Trigger

1. Click on (+) Icon to Configure the Trigger 2.
- Select Trigger as Application >> Service catalog 3.
- Click on **Done**.

7. Conclusion

The **Automated Network Request Management in ServiceNow** project provides a simple and efficient way to manage network-related requests.

The project uses **Service Catalog, Variables, Catalog UI Policies, Tables, Approval processes, and Flow Designer** to automate the request process.

Instead of handling every request manually, ServiceNow can automatically create records, process approvals, send notifications, and update request information.

As a result, the solution helps **save time, reduce manual effort, improve request tracking, and provide a better experience for both users and IT teams.**
