

Ideation Phase

Empathize & Discover

Date	19 September 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

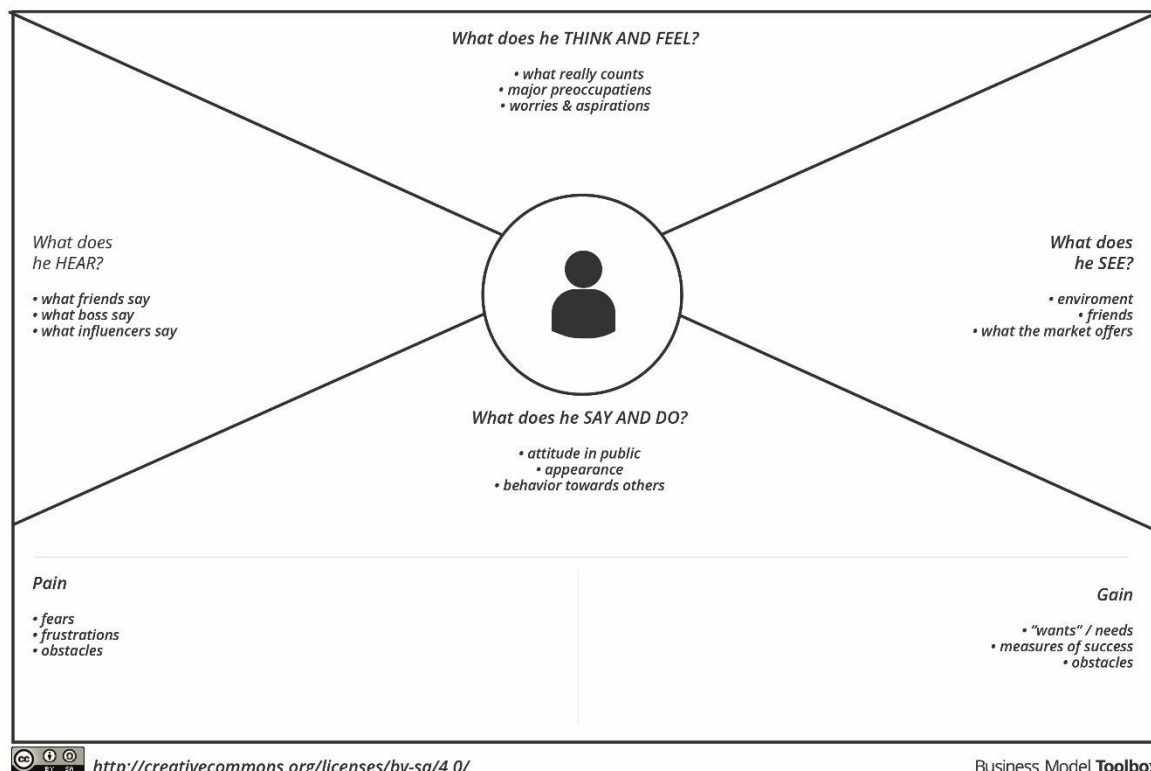

An empathy map captures the needs, behaviours, expectations and challenges of users who interact with the network request process.

It helps the project team understand how employees, requesters and IT support staff experience network service requests.

Creating an effective automated solution requires understanding the user's perspective, including the need for faster request submission, clear status visibility, accurate information and timely resolution.

Example: Food Ordering & Delivery Application

Empathy Map – Automated Network Request Management

THINK & FEEL

- Wants a simple request process
- Expects quick response and resolution
- Wants clear status updates
- Feels frustrated by delays and repeated follow-ups

SEE

- ServiceNow request form
- Request status and notifications
- Approval and assignment stages
- IT support actions and updates

NETWORK REQUEST USER

HEAR

- Instructions from IT team
- Updates from support staff
- Approval-related messages
- Feedback from other employees

SAY & DO

- Submits network requests
- Provides required request details
- Checks request status
- Responds to IT queries and approvals

PAIN

- Manual request handling
- Long response and resolution time
- Incomplete or incorrect request details
- Limited visibility of request progress

GAIN

- Faster request processing
- Automated routing and approvals
- Clear status visibility
- Consistent and trackable service

Project focus: Automated Network Request Management in ServiceNow
